NO-CAM PERFORMANCE FREERIDE

What is the Ezzy Cheetah?

A high performance, camless freeride sail.

Who is the Cheetah for?

Intermediate and expert windsurfers who want a well built, fast, and easy handling sail for freeriding.

What makes the Cheetah special?

The Cheetah has the shape, power, and stability of a cambered sail without the hassles that come with cams.

What feels different on this year's Cheetah?

- 1) More compact.
- 2) Lighter.
- 3) More low-end power.

What else?

With the center of effort moved lower and forward, the Cheetah pulls evenly between the front and rear arms.

New scrim reinforcements are lighter because they

don't absorb water.

The Cheetah requires less downhaul tension, which results in a fuller leading edge and improved low-end.

Why buy a Cheetah?

You can have fewer sails in your quiver because the Cheetah's "baked-in" profile makes it stable across a wide wind range.

The Cheetah is light-weight and built to last. Our materials include scrim, Dyneema, Technora, and RBS epoxy battens (the strongest battens in the world).

Our calibrated downhaul system shows you exactly where to set your downhaul.

The Cheetah is ready to go right out of the bag. Every Cheetah is pre-rigged, allowing us to scrutinize our work, tension the battens, and wish our creation bon voyage.

Is the Cheetah the right sail for you?

If you need a sail with speed and control that is easy to rig and built to last, we highly recommend the Cheetah.
